

This template is good for the so called standard shed or small out building. There are options here, you can use sono tubes or cement blocks to support the smaller building. You may need a more robust foundation for a larger structure.

Choose the options you would like to use, fill in the blanks for sizes of the components and dimensions. Then submit these sheets, a plot plan and the completed application, we will review and the permit should be ready in 2 weeks, we will call you.
